Product information, including uses/applications and source(s) of imports:

Mesotrione, which is imported from Switzerland, is the active ingredient used to manufacture broadleaf herbicides to control broadleaf weeds in corn. It is a member of a relatively new class of chemistry which provides an effective alternative to traditional triazine, phenoxy, benzoic acid, benzonitrile, and ALS herbicides which are currently used for broadleaf weed control in corn. Mesotrione was registered by the EPA as a "reduced risk" product because of its low acute toxicity and because it breaks down rapidly in soil, posing minimal risk to groundwater or to rotational crops.
